## 2009 Young Innovators Under 35: Jaime Teevan, 32

by Kurt Kleiner

Technology Review

Sept/Oct 2009

*Microsoft Research—Using personal information to improve search results*

- 1 In 1997, when search engines were relatively new, Jaime Teevan took an internship at Infoseek the summer before her senior year at Yale. William Chang, the chief technology officer, put her in a room with some research and told her to “find something fun to do.” She came up with some ideas for judging link quality and helping people navigate the company’s search engine, and she wrote the code to implement the changes. “Once, I brought the search engine down for a couple of hours,” she says with a laugh.
- 2 But she also discovered a career path. Today, the Microsoft researcher is a leader in using data about people’s knowledge, preferences, and habits to help them manage information. She studies the ways people navigate the flood of information available in the digital age and builds tools to help them handle it.
- 3 By now, personal information management has become an Internet buzzword. But Teevan pioneered the field as a graduate student working with David Karger, a professor in MIT’s Computer Science and Artificial Intelligence Laboratory. “She literally almost single-handedly created this whole area,” says Eric Horvitz, a principal researcher who manages teams pursuing advances in search and retrieval at Microsoft Research.
- 4 She began by studying how people search the Internet. They use such different strategies, she found, that a one-size-fits-all search engine can never satisfy everyone. So Teevan started building tools that sort Internet search results according to a user’s personal data, previous searches, and browsing history.
- 5 One of her first tools was a search engine called Re:Search. Early on, Teevan discovered that people are often looking for information they’ve already

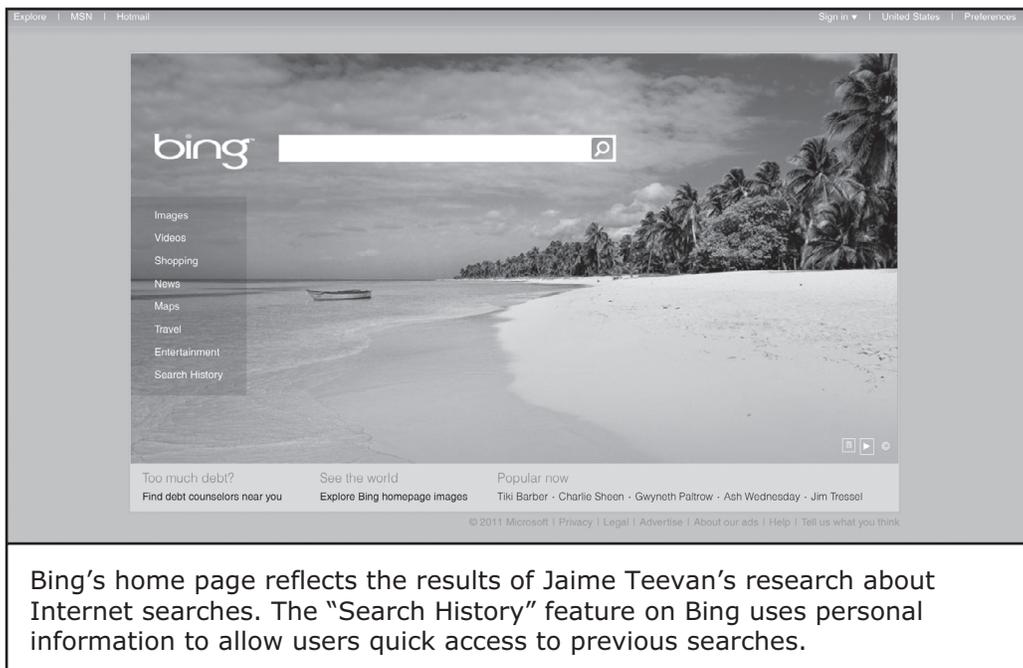

Jaime Teevan, a 2009 Young Innovator honoree, works at Microsoft. She researches how people search for information online and what they do with the large amount of information they find.

found before; more than half of all Web-page visits and a third of all search queries are repeats. But since the Web is always changing, people often have a hard time finding a site again. Re:Search relies on information from a user's past searches to determine which items are more relevant to him or her. Teevan found that people tend to remember the first item in a list of previous search results, as well as items they clicked on; they also tend to get confused if the results they clicked on have changed position in the list. So she designed Re:Search to keep clicked links in their previous positions and insert new links in positions where they will be noticed without being confusing or distracting.

- 6 One of Teevan's key ideas is that search engines can employ information about users to help them zero in on the results they need. Since she joined Microsoft Research in 2006, she's developed a number of experimental browser plug-ins that work with Internet Explorer and that will refine search results for each user. One, called PSearch, uses an index of documents, e-mails, and other material on the user's hard drive to customize the results delivered by an Internet search engine. For instance, if she types her husband's last name into a typical search engine, the top hits are for a financial-services firm that shares his name. When she turns PSearch on, the first sites listed relate to her husband.
- 7 Horvitz says that PSearch has been piloted internally at Microsoft for a number of years and has proven very promising. "What I like best is that all the personalization is going on on your desktop," he says. In fact, PSearch never shares a user's personal information with the search engine—the results are re-sorted after they're delivered to the user's computer.

Bing's home page reflects the results of Jaime Teevan's research about Internet searches. The "Search History" feature on Bing uses personal information to allow users quick access to previous searches.

- 8 Teevan's programs have yet to be released commercially, and because search is such a competitive area for Microsoft, both she and Horvitz declined to discuss any such plans. But both eagerly talk about her contributions to Microsoft's new search engine, Bing. Teevan says she met regularly with Bing's developers to help them understand how people search and how that knowledge might be used to improve search results. Horvitz points more directly to the left-hand column of the Bing search results page, where a short list titled "Search History" appears. "You see just the tip of the iceberg right now in the current Bing search." Teevan's work is actually more advanced, Horvitz says. Hinting at things to come, he adds, "You might watch that corner of Bing over time."

## Digital Dad Versus the Dinosaurs

by Emily Bingham

Newsweek

April 6, 2009

1 Sometimes, being right hurts the most. I imagine that's how my father, Barry Bingham, Jr., would have felt about the crisis that could end America's golden age of print journalism. My great-grandfather bought *The Courier-Journal* of Louisville, Ky., during World War I, and my father ran the paper from 1971 to 1986. Now it's going through the same layoffs and cost-cutting measures that are happening to newspapers across the country. Lately, I've wondered a lot about what my father would be thinking right now—because he saw all of this coming.

Barry Bingham, Jr., meets with his Courier-Journal staff in 1984. One year earlier, Bingham had declared that the newspaper business resembled "the last dinosaur in the swamp."

© The Courier-Journal

- 2 Addressing his classmates at their 25th college reunion, my father predicted that by the time they met for their 50th, "most of what we read will be transmitted into our homes or offices electronically." This was a strange thing to say in 1981, when the revolution in personal computers had scarcely begun and no one had heard the words "World Wide Web." Unlike almost everyone else in the media industry back then, my father anticipated the coming era of electronic news, and he was genuinely excited about it. He believed newspapers could save themselves from extinction—but only if they adapted early and intelligently to new technology.
- 3 It became his passion—a subject of countless family dinner discussions. But as a gangly 16-year-old, I tuned out most of the talk. I was more interested in finding a party and a boy to kiss.
- 4 I wasn't the only one who turned a deaf ear. Newspaper people are a crusty lot, and Gutenberg's technology, with a few tweaks over the centuries, had held up well enough for most. My father would buttonhole colleagues at meetings, where they grumbled that he was distracting from what they considered their business: getting news onto paper and into a reader's hands. One former publisher told me recently that Barry Bingham, Jr., "was the visionary among us. He said what we didn't want to hear and we ran from it."

5 And so, when the news broke late last year that subscribers to the *Detroit Free Press* would soon get home delivery just three days a week, I turned to my kids and told them their grandfather knew this would happen. He was a third-generation publisher, but he was keenly aware of how “new media” could positively affect the family business: his grandfather bought a radio station in 1922 and his father entered the TV market in 1950.

6 As a little girl visiting him at *The Courier-Journal's* office in downtown Louisville, my favorite stop was the deafening press room. I was too young to make sense of his efforts to modernize the operations, but under his management, the newspaper was at the vanguard of technological change. In 1973 he began replacing typewriters with word processors. The composing room

was one of the first to be computerized, and my father marveled at the way content flew paperlessly around the building.

7 Out of this petri dish of the 1970s, my Datsun-driving environmentalist dad hatched his vision of what he called the “electronic newspaper.” It would arrive, “Jetsons”-like, via cable, satellite or telephone lines, accessed and updated around the clock. Subscribers would pay lower rates. Trees would be spared, fuel conserved. Information was his passion, and his goal was to offer as much of it to as many people as possible. (He was such an info junkie that, many years later, when I was pregnant, he couldn’t comprehend my decision not to find out whether I was carrying a boy or a girl.) He believed that the future of news lay in allowing readers to decide what was most important to them, as with today’s customizable home pages. To most editors, this was heresy. This frustrated him and he made little effort to hide it. “This business,” he snapped to a reporter in 1983, “is like the last dinosaur in the swamp.”

8 In 1986 *The Courier-Journal's* pilot electronic edition, accessible by modem, made a promising debut. But within a few years, several family members decided to sell their stock in the company, and the Gannett Co. purchased the paper. His parents supported the sale over his objection. He lost his job and his platform.

Massive rolls of newsprint paper are used in newspaper printing machines. In recent years, newspaper circulation and income have fallen sharply, while one-quarter of all newsroom employees have lost their jobs.

- 9 As the Internet exploded, my father took a certain satisfaction in being right. But he was never a finger-wagger. By the time he died in 2006, at 72, he could have easily gotten his news online. Yet he kept his print subscriptions and read *The Courier-Journal* and *The New York Times* over breakfast. The swamp clung a little—even to him.

**Use "2009 Young Innovators Under 35: Jaime Teevan, 32" (pp. 4–6) to answer questions 1–6. Then fill in the answers on your answer document.**

- 1** In paragraph 1, the author quotes William Chang to show that —
- A** typical internships are boring
  - B** Teevan was given the freedom to experiment
  - C** Teevan caused problems as an intern
  - D** supervisors are required to have strict oversight
- 
- 2** In the article, what is the most likely reason Teevan wouldn't discuss the commercial release of her programs?
- F** The programs had not yet been tested and shown to be operational.
  - G** She is modest about her accomplishments.
  - H** Microsoft's competitors might use the information to develop similar programs.
  - J** Microsoft is responsible for the programs' release.
- 
- 3** An image of the Bing home page is included primarily to —
- A** call attention to some of Teevan's work at Microsoft
  - B** explain why Teevan was named a 2009 Young Innovator
  - C** direct the reader to the best place to learn more about Teevan
  - D** illustrate the size and complexity of the Internet

- 4 The author organizes the article by —
- F describing the work of several young software experts
  - G providing a chronological summary of Teevan’s career
  - H reviewing the history of search engine technology
  - J profiling Teevan’s current and future projects
- 

5 Which of these is the best summary of the selection?

- A Jaime Teevan, who works for Microsoft, has become a leader in the field of personalizing Internet search results. Through her research, she has found that people often repeat the same searches. She has developed ways of using this knowledge to make future searches more productive.
  - B Microsoft Research, a division of the country’s largest software company, hires only the most promising and creative students emerging from leading graduate programs. By recruiting these talented employees, Microsoft has developed cutting-edge programs such as the search engine Bing.
  - C Jaime Teevan created the field of personal information management. After many failures, which included crashing Infoseek’s search engine on one occasion, she discovered some data on the Internet that convinced her that search engines were poorly designed.
  - D Personal information management has become an important field of study for computer programmers. Since discovering that people search the Internet in different ways, programmers have been building tools that sort search results according to a user’s personal preferences.
- 

6 Why does the author end the article with a quotation?

- F To imply that Microsoft prefers to keep its research secret
- G To hint that Teevan is preparing to change careers
- H To interest the reader in following Teevan’s contributions
- J To show the reader that Microsoft employs many talented people

**Use “Digital Dad Versus the Dinosaurs” (pp. 7–9) to answer questions 7–11. Then fill in the answers on your answer document.**

- 7 In paragraph 7, which term refers to a belief that is contrary to prevailing opinion?
- A *heresy*
  - B *info junkie*
  - C *environmentalist*
  - D *petri dish*

- 
- 8 Read these sentences from paragraph 4.

*One former publisher told me recently that Barry Bingham, Jr., “was the visionary among us. He said what we didn’t want to hear and we ran from it.”*

The primary purpose of the text above is to —

- F indicate the competitive nature of the newspaper business
- G describe how surprised the author’s father was at how things turned out
- H explain Barry Bingham, Jr.’s success in the newspaper business
- J support the idea that Barry Bingham, Jr.’s predictions were accurate

- 9 In paragraph 7, why does the author refer to saving trees and conserving fuel?
- A To show that environmental considerations are her top priority
  - B To suggest that one of her father’s motives was concern for the environment
  - C To support her assertion that her father was unrealistic and propelled by wishful thinking
  - D To make a connection between the assumed benefits versus the actual results of digital publishing
- 

- 10 In paragraph 4, why does the author choose the word “crusty” to describe newspaper people?
- F To indicate that they didn’t allow outsiders in very easily
  - G To express what was wrong with traditional newspapers
  - H To suggest one reason why they weren’t receptive to her father’s ideas
  - J To establish the difference between her father and his colleagues
- 

- 11 Read this sentence from paragraph 9.

*The swamp clung a little—even to him.*

In this sentence, the author uses descriptive language to indicate that —

- A her father changed his mind about newspapers
- B change comes very slowly to the publishing industry
- C a part of her father was still tied to the past
- D her father wasn’t actually in favor of electronic publishing

**Use “2009 Young Innovators Under 35: Jaime Teevan, 32” and “Digital Dad Versus the Dinosaurs” to answer questions 12–16. Then fill in the answers on your answer document.**

- 12** What is one similarity between the selections?
- F** They both address the attitudes of people from multiple generations.
  - G** They both explain the harm caused by the advent of the digital age.
  - H** They both profile people whose warnings have been ignored.
  - J** They both include observations about one person’s unique contributions.

- 
- 13** How does Barry Bingham, Jr., differ from Jaime Teevan?
- A** He was unable to adapt to change.
  - B** He misunderstood the importance of digital technology.
  - C** He witnessed the decline of the industry in which he worked.
  - D** He recognized the role of computers in the media.

- 
- 14** What is one difference in the endings of the selections?
- F** One looks forward, while one looks to the past.
  - G** One expresses admiration, while the other expresses disdain.
  - H** One introduces a new subject, while the other introduces a new idea.
  - J** One uses irony, while the other uses humor.

**15** The tone of both selections can best be described as —

- A** whimsical
- B** skeptical
- C** respectful
- D** nostalgic

---

**16** Unlike the author in “Digital Dad Versus the Dinosaurs,” the author of “2009 Young Innovators Under 35: Jaime Teevan, 32” —

- F** clearly admires his subject
- G** has no apparent family connection with his subject
- H** fails to provide any educational background about his subject
- J** has never met or spoken with his subject

**SHORT ANSWER #1**

**DIRECTIONS**

**Answer the following question in the box labeled "Short Answer #1" on page 2 of your answer document.**

Do you think Jaime Teevan in "2009 Young Innovators Under 35: Jaime Teevan, 32" and Barry Bingham, Jr., in "Digital Dad Versus the Dinosaurs" have anything in common? Explain your answer and support it with evidence from **both** selections.
